

# BRYAN TALAVERA

Data Analyst · Analytics Engineer | UCSD B.S. Data Science

San Diego, CA · [bryantalavera.gomez@gmail.com](mailto:bryantalavera.gomez@gmail.com) · [github.com/Bryan-Tal](https://github.com/Bryan-Tal) · [bryan-tal.github.io](https://bryan-tal.github.io) · [linkedin.com/in/bryan-t163001290](https://linkedin.com/in/bryan-t163001290)

## SUMMARY

UCSD B.S. Data Science graduate building production-grade analytics and data engineering work, including a multi-phase NYC TLC ELT pipeline (Airflow, dbt, Snowflake) and tuned ML classifiers (0.95 AUC churn, 83% F1 taxi gratuities). Proficient in SQL, Python, Tableau, and the modern data stack. Targeting full-time data analyst, analytics engineer, or data engineer roles.

## EDUCATION

University of California, San Diego · B.S. Data Science, Minor in Cognitive Science

2024

## CERTIFICATIONS

Google Advanced Data Analytics Professional Certificate · Coursera · 2024 · [View credential](#)

## PROFESSIONAL EXPERIENCE

Full-Stack Developer, PuffRepairz | [puffrepairz.com](https://puffrepairz.com) | San Diego, CA | Jun 2026 - Present | SQL · PostgreSQL(Supabase) · React · Stripe API · Recharts · Vercel · Git · Claude Code (AI-assisted development)

- Built and launched a **production booking and payments platform** for a mail-in device repair business, serving **850+ registered customers** and generating **\$14000 in revenue** since launch.
- Developed with **Claude Code as an AI pair programmer** under a **spec-first process** I set up: wrote each feature's requirements and data model before any code, then reviewed, tested and deployed every change.
- Designed a **PostgreSQL data model** (56 versioned migrations, row-level security) and **25+ SQL analytics functions** tracking funnel conversion, **cohort retention**, **p50/p90 turnaround** and **margin by service**. Every rate is reported as numerator over denominator, with test and refunded jobs excluded.
- Integrated **Stripe**, **EasyPost** and **Resend** through 15 serverless functions with **idempotent webhooks** (no double charges or duplicate labels on retries), and **automated 16 transactional email types** plus hourly reminder and survey jobs.

## PROJECTS

Predicting Employee Churn | Python · Scikit-learn · XGBoost · Pandas · GridSearchCV

2025

[github.com/Bryan-Tal/Predicting\\_Employee\\_Churn](https://github.com/Bryan-Tal/Predicting_Employee_Churn)

- Compared Decision Tree, Random Forest, and XGBoost classifiers on an 11,991-row HR dataset; selected Random Forest as champion via 5-fold GridSearchCV refit on ROC-AUC
- Achieved 0.95 AUC, 97.97% accuracy, and 90% recall on the held-out test set; engineered an overworked feature (>175 hrs/mo) that ranked among the top predictors
- Surfaced that 100% of employees with 7 concurrent projects left the company, identifying a workload threshold for HR retention strategies

Predicting NYC Taxi Gratuities | Python · XGBoost · Scikit-learn · Pandas · GridSearchCV

2025

[github.com/Bryan-Tal/Predicting\\_NYC\\_Taxi\\_Gratuities](https://github.com/Bryan-Tal/Predicting_NYC_Taxi_Gratuities)

- Built a binary classifier predicting generous tippers (>20%) on 408,000+ NYC yellow taxi trips, tuning XGBoost via 5-fold GridSearchCV refit on F1
- Achieved 83.3% accuracy and 84% F1 on the held-out test set, beating the Random Forest baseline by +12.7 F1 points
- Engineered time-of-day, day-of-week, and rate-code features from raw timestamps; documented cash-payment survivorship bias as a model limitation

Predicting House Prices with OLS & Ridge Regression | Python · NumPy · SciPy · Pandas · Matplotlib

2025

[github.com/Bryan-Tal/Predicting\\_House\\_Prices\\_OLS](https://github.com/Bryan-Tal/Predicting_House_Prices_OLS)

- Implemented Multiple Linear Regression and Ridge Regression from scratch using the closed-form normal equation in NumPy, foregoing scikit-learn for the regression itself
- Validated all 5 OLS assumptions (Shapiro-Wilk, Anderson-Darling, K-S, VIF) and searched 4 scaling methods × 7 Ridge  $\alpha$  values; champion model achieved  $R^2 = 0.66$ , RMSE = 0.108

Med-Dash · UC San Diego Capstone | React · MongoDB · ECharts · Vital API

Sep 2023 to Mar 2024

- Built a personalized, interactive dashboard for patients to visualize 3 daily health metrics (heart rate, sleep, activity) ingested from the Vital API
- Collaborated with a 4-person interdisciplinary team to integrate data persistence (MongoDB) and frontend visualization (React + ECharts); led validation across 3 wearable sensor types

## SKILLS

Languages: Python, SQL, JavaScript, R, TypeScript

Machine Learning & Statistics: Scikit-learn, XGBoost, Pandas, NumPy, SciPy, Statistical Testing (Shapiro-Wilk, Anderson-Darling, K-S, VIF), GridSearchCV

**Visualization & BI:** Tableau, Matplotlib, Seaborn, ECharts, D3.js  
**Tools & Databases:** Git/GitHub, Jupyter, MongoDB, PostgreSQL, MS SQL Server, Supabase, Stripe API, Claude Code(AI-assisted development), Recharts, Vercel,

**WORK EXPERIENCE**

---

- In-Store Shopper, Pavilions · San Diego, CA** April 2025 - Present
- Fulfilled 20+ time-sensitive grocery orders per shift while maintaining a 98%+ on-time completion rate
  - Trained new associates on workflow procedures and order-fulfillment best practices, reducing handoff delays during shift transitions
